

## What is a chase cover?

Chase covers are metal pans that sit on top of the chimney chase. Their purpose is to shed water away from the chimney protecting the body from water penetration. Unfortunately, many chase covers are poorly designed or made of materials that develop leaks after only a few years. The "Bird Bath" effect occurs when a metal chimney chase has a low spot that collects water. Standing water causes the cover to rust prematurely, eventually destroying it.

## Why you may need a new chase cover:

- Tired of rust streaks down your chimney?
- Annoyed with water leakage?
- Afraid of what the winter weather may bring?

## Galvanized Chimney Chase

Chase is rusted and no longer functioning correctly or safely.

## Stainless Steel Chimney Chase

New Stainless Steel Chase is rust resistant and functions properly for years of safe operation.

## Why choose an Absolute Chimney stainless steel chimney chase cover?

- Chase covers are custom manufactured by Absolute Chimney to fit any size chimney.
- Chase covers manufactured by Absolute Chimney are made of 24 gauge stainless steel and have a lifetime warranty.
- A crossbreak bend on the top of chase cover creates a dome shape to prevent snow and water from collecting on the top and eliminate sagging of the chase cover.
- Absolute chimney chase covers have welded corner seams and welded 2" high collars on all openings.
- Absolute Chimney chase covers have a 1/2" drip edge to shed water away from the sides of the chimney chase.
- Custom chase covers can be made in different gauge thicknesses (22 gauge, 20 gauge, and 18 gauge) as needed per installation.
